Set1 A time: 40 min
1. Create directory structure as follows [10]
  HR (dir)
       staff1(file)
       staff2 (file)
Marketing (dir)
     staff1(file)
     staff2(file)
Admin(dir)
     staff1(file)
     staff2(file)
   Now delete all the files in marketing directory but system will ask user for that.

2. Find no. of words in all files of admin directory by incorporating 'expr' command.[10]

3. Write a shell script which will print name and size of all the files in your home directory in two column format (size is displayed in ls –l command size column).[20]
